

SAGNIK DEY

Hybrid Engineer (SDET | Full-stack | AI/ML Interest)

sagnik22dey@gmail.com | linkedin.com/in/sagnik-dey-712a4618b | Kolkata, India

A versatile and detail-oriented Software Development Engineer with 2 years of experience, specializing in the intersection of robust **Automation (SDET)**, **Full-stack** application development, and an emerging interest in **AI/ML** technology quality. Proficient in building and scaling test automation frameworks using Java, JavaScript, and WebDriverIO. Experienced in applying strong programming and database skills (Python, Java, SQL) to both feature development and comprehensive system testing. Eager to leverage analytical skills and a full-spectrum engineering mindset to build, deliver, and ensure the quality of complex, high-quality software products, including those leveraging computer vision and data comparison logic.

Cognizant | Kolkata, India

QA Automation Testing / Software Engineer in Test | 09/2023 - Present

A multinational corporation providing IT services, including digital, technology, consulting, and operations services.

- **Automation Development:** Engineered and deployed robust JavaScript-based **WebDriverIO** scripts to automate end-to-end (E2E) UI testing, validating application functionality, responsiveness, and cross-browser compatibility.
- **System Stability:** Designed comprehensive test suites and consistently executed regression and sanity testing to maintain application stability within a fast-paced Agile environment.
- **Engineering Practice:** Employed a hybrid testing approach, combining automated coverage for maximum efficiency with manual exploratory testing to uncover subtle usability and edge-case defects.

Cognizant | Kolkata, India

SDET Intern (Software Development Engineer in Test) | 05/2023 - 09/2023)

- Completed an intensive internship focusing on software testing principles, methodologies, and automation frameworks, with a primary focus on **Selenium with Java**.
- Gained hands-on development experience in test case design, execution, and defect reporting within continuous integration (CI) development cycles.

-----Skills

Area	Technologies
Programming	Python, Java, JavaScript, SQL, TypeScript (Project Context)
Full-stack/Web	HTML, CSS, React Native (Project Context), API Testing (RESTful Services)
Testing/SDET	Selenium, WebDriverIO, Cucumber, TestNG/JUnit, Postman, Test Case Design, Test

	Reporting, Defect Tracking
AI/ML/Data	Computer Vision (YOLOv5 Model Testing), Data Validation, PostgreSQL, SQL
Methodologies	Agile, BDD (Behavior Driven Development), Git (Version Control)

Pricely | React Native Application - Full-stack Development & Testing | 02/2024 - 04/2024)

A mobile application addressing the inefficiency of manual price comparison across quick commerce platforms.

- **Full-stack Contribution:** Developed core application features using **React-Native/TypeScript** for the front-end, including logic for scraping and comparing prices from major quick commerce platforms (Zepto, Blinkit, Instamart, etc.) while accurately factoring in delivery fees.
- **Quality Assurance:** Led testing efforts covering functional, UI, and **API** testing for backend communication to ensure the accuracy of data scraping, comparison logic, and the cart redirection system.

The Blind Assist - AI/ML Integration & Testing | 01/2023 - 06/2023

An Android application to assist visually impaired individuals by facilitating currency identification.

- **AI/ML Focus:** Performed comprehensive quality assurance, including functional and integration testing, for the **YOLOv5 computer vision model** used for real-time currency detection within the Android application.
- **Testing Complexity:** Designed and executed specialized test cases to rigorously validate computer vision model accuracy, camera functionality, and overall system reliability.

FitsMate | Web-Application - Full-stack Development & Testing | 11/2025 - 12/2025)

A web application addressing the inefficiency of manual price comparison across quick commerce platforms.

- **Full-stack Contribution:** Developed core application features using **React-Native/TypeScript** for the front-end, including logic for scraping and comparing prices from major quick commerce platforms (Zepto, Blinkit, Instamart, etc.) while accurately factoring in delivery fees.
- **Quality Assurance:** Led testing efforts covering functional, UI, and **API** testing for backend communication to ensure the accuracy of data scraping, comparison logic, and the cart redirection system.

FitsMate: Fitness Brand Portfolio Application

A comprehensive portfolio page for a fitness brand, featuring distinct user and administrator interfaces for data tracking and performance management.

- **User/Admin Authentication:** Implemented secure login systems for both general users and administrators.
- **Data Tracking:** Developed features enabling users to track their progress, follow personalized curricula, and view their performance results within the application.
- **Administrator Dashboard:** Created an admin interface for overseeing user data, managing content, and analyzing brand-wide metrics.

B.P. Poddar Institute of Management of Technology (MAKAUT) | Kolkata, India
Bachelor of Technology (B.Tech) | 08/2019 - 05/2023
